Inside Secure Honored as Silver Winner in the 11th Annual 2015 Security Industry's Global Excellence Award in both Product & Services Excellence and Most Innovative Security Company categories

INSIDE wins the Coveted Global Excellence Award with Finalists from all over the World

Aix-en-Provence, France – May 07, 2015 – Inside Secure, a leader in embedded security solutions for mobile and connected devices, today announced that Info Security Products Guide, the industry's leading information security research and advisory guide, named Inside Secure and its MatrixHCE product Silver winners of the 2015 Global Excellence Awards in both Products and Services Excellence and Most Innovative Security Company of the Year. The security industry celebrated its 11th Annual 2015 Global Excellence Awards in San Francisco by honoring excellence in every facet of the industry including products, people behind the successes, and best companies.

More than 50 judges from a broad spectrum of the industry around the world determined the 2015 Global Excellence Awards Finalists and Winners. Winners were announced on April 20, 2015 in San Francisco.

INSIDE's MatrixHCE was recognized for its product innovation by providing secure host card emulation (HCE) functionality based on the leading payment brand standards. MatrixHCE is targeted to allow Android Mobile App developers to speed up their development and time to market by combining HCE payment functionality and scheme compliant software security as a packaged solution. This latest award follows after MatrixHCE was named winner of the coveted Sesames award from mobile communications.

Inside Secure attributes its *"Most Innovative Security Company"* recognition to INSIDE's vision to fundamentally re-shape the industry's approach to security in response to today's "Internet of Everything", where billions of devices must be trusted. Inside Secure, which recently won the coveted Frost and Sullivan European Company of the year, recognizes the world of security is changing and the time has come to enhance existing security models by putting embedded security at the heart of the device or application that needs to be protected. INSIDE recently announced an important milestone supporting this vision -- certification times for IP components of just one month, dramatically speeding time to market for secure devices by 11 months.

"It's an honor to win multiple awards from the Info Security Products Guide, further validating Inside Secure and MatrixHCE as leaders and ahead of the curve," said Remy De Tonnac, CEO of Inside Secure. "These industry honors are the greatest endorsement for Inside Secure's robust offering and highlights that we are a key player in the mobile security industry and the emerging Internet of Things and Brand Protection (anti-counterfeiting) markets."

About Info Security Products Guide

Info Security Products Guide sponsors leading conferences and expos worldwide and plays a vital role in keeping end-users informed of the choices they can make when it comes to protecting their digital resources. It is written expressly for those who are adamant about staying informed of security threats and the preventive measure they can take. You will discover a wealth of information in this guide, including tomorrow's technology today, best deployment scenarios, people and technologies shaping info security, and market research that facilitate the most pertinent security decisions.
