

Inside Secure Delivers Secure Content Distribution and Monetization Software for the HTC Vive Ecosystem

📅 Sep 5, 2016

Native integration of advanced content protection technology within HTC Vive virtual reality system to reassure developers and boost content proliferation

Aix-en-Provence, France, September 6th, 2016. – [Inside Secure](#) (Euronext Paris: INSD), a leader in embedded security solutions for mobile and connected devices, today announced to integrate Inside Secure's leading content protection technology into HTC's Vive™ system environment, providing complete reassurance of secure content deployment.

The most important factor in pervasive consumer and business adoption of virtual reality is a broad community of developers generating compelling content across multiple applications. To achieve this, there needs to be an intuitive way to ensure copyright is protected and content is secure. Inside Secure's recognized content protection technology will support content creators and developers to guaranteeing VR content is protected from server to device.

"We are very pleased to be selected by HTC, an leading innovator in virtual reality, to create a significant breakthrough in the VR industry," said Andrew McLennan, executive vice-president of Inside Secure's Mobile Security Division. "Driving trust all along the VR content distribution chain will benefit the user experience by greatly enriching the content offering."
