

Aix-en-Provence, France, August 27, 2018 – [Inside Secure](#) (Euronext Paris: INSD), at the heart of security solutions for mobile and connected devices, today announced it was recognized as a Representative Vendor in the June [2018 Gartner Market Guide for Application Shielding](#).

Written by analysts Dionisio Zumerle and Manjunath Bhat, the report states, “Security and risk management leaders must harden their application front ends to avoid turning them into an attack vector,” noting that protecting applications is crucial as software logic continues to migrate to the client side.

Protecting application code is fundamental to securing end points - without which the whole infrastructure cannot be secured. Inside Secure's Code Protection solution provides powerful automated software protection tools applicable across Mobile, IoT, Desktop and Server platforms.

“Developers consistently praise Inside Secure’s powerful code protection technology, as it provides a foundational layer of security using anti-tampering and obfuscation that is repeatedly proven to safeguard apps that run in untrusted environments,” said Amedeo D’Angelo, CEO at Inside Secure. “We’re pleased to bring the protection apps need as well as an efficient and automated build process that developers routinely applaud.”
